SUMMARY

Computer Science undergraduate with strong interest in software development and full-stack web technologies. Proficient in C++, Python, and building web applications using the MERN stack. Experienced in developing and deploying applications, working with databases, and writing clean, maintainable code. Actively learning Data Structures and Algorithms and seeking opportunities to grow as a Software Development Engineer.

EDUCATION

B.Tech in Computer Science and Engineering, VIT Bhopal University (GPA: 9.34)

Sep '23 — Present

EXPERIENCE

Full Stack Developer Intern

May '26 — Jun '26

Netlink Software Pvt. Ltd

Bhopal, Madhya Pradesh, India

Developed a full-stack PTE exam preparation platform using **React.js**, **TypeScript**, **Node.js**, **Express.js**, and **Snowflake**.

- Designed and integrated RESTful APIs for question management, test submissions, and user performance tracking.
- Implemented secure authentication and authorization using **Firebase Authentication** with Email/Password and Google Sign-In.
- Contributed to testing, code quality analysis using **SonarQube**, and CI/CD automation with **GitHub Actions**.
- Deployed and maintained the frontend on **GitHub Pages** and backend services on **Render**.

PROJECTS

PTE Exam Preparation Platform

- Developed a full-stack web platform for **PTE Academic exam preparation**, providing practice across Speaking, Writing, Reading, and Listening modules.
- Built realistic mock tests with timed sections, navigation controls, automated scoring workflows, and progress tracking dashboards to simulate the actual PTE exam experience.
- Implemented role-based authentication using **Firebase Authentication**, secure REST APIs, and **Snowflake** for efficient storage and management of question banks, user responses, and test data.
- Deployed the application using **GitHub Pages** and **Render**, while integrating **GitHub Actions** for CI/CD and **SonarQube** for continuous code quality analysis.

AI-Powered Content Automation Platform

- Developed an AI-powered image generation web platform for automated content workflows.
- Designed responsive frontend interfaces and integrated backend services for seamless data handling.
- Implemented modular architecture to support scalable feature expansion and maintainable code structure.

Production-Ready Web Application Deployment using Nginx and MySQL

- Deployed a full web application stack configured with Nginx web server and MySQL database integration.
- Structured backend connectivity and server configuration following real production deployment practices.
- Demonstrated understanding of web hosting pipelines, database linking, and server optimization basics.

SKILLS

Programming C++, Python, Java, SQL

Web Development HTML, CSS, JavaScript, TypeScript, React.js, Node.js, Express.js

Database MongoDB, MySQL

AWS / Cloud EC2, S3, VPC, IAM, Docker, Linux, Nginx, Deployment & Hosting

Tools Git, GitHub, VS Code, Postman

CERTIFICATIONS

Introduction to Machine Learning, NPTEL

Bits and Bytes of Computer Networking, Coursera
